

BULLNOSE ESTIMATING GUIDE

STEP 1 For linear applications, determine linear feet to be covered.

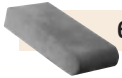

STEP 2 Double number of linear feet to determine number of bullnose pavers needed (two per linear foot).

Willow Creek Bullnose Pavers put a classy finishing touch on any landscaping project. Bullnose pavers add a safe, rounded edge when used as stair treads and pool coping. Seat walls are more comfortable when capped with bullnose pavers, and they make an attractive cap on retaining walls and freestanding columns as well. Bullnose pavers also provide a smooth perimeter when used as a soldier course around a raised paver patio.

Check our website or your nearest supplier to determine color availability.
